

Fold change of cytokine levels between the severe and mild disease in the Late Convalescent phase

Fold change of cytokine levels between the severe and mild disease in the Mid Convalescent phase

Fold change of cytokine levels between the severe and mild disease in the Acute phase

Cytokine Function

- Chemotaxis during inflammation
- LDL oxidization
- Proliferation/differentiation/activation of lymphocytes
- Proliferation and differentiation of epidermal cells
- Acute inflammatory response
- Apoptosis
- Tissue regeneration
- Proliferation/differentiation/activation of monocytes
- Lymphocyte migration
- Tissue remodeling
- Proliferation/differentiation/activation of granulocytes
- Proliferation and differentiation of endothelial cells
